

INSTALLATION INSTRUCTIONS

For 12' Tall x 14' Wide x 35' Deep Batting Cage

Your batting cage frame kit comes with the following:

- (4) Three-Way Corner Fittings
- (2) Four-Way Corner Fittings
- (6) Ground Sleeves
- (20) 5/16" x 1/2" bolts
- (13) 59" Poles – straight, hole on each end
- (3) 17 1/2" Poles – swaged on one end, hole in the other end
- (20) 59" Poles – swaged on one end, hole in the other end
- (6) 36 1/2" Poles – swaged on one end, hole in the other end
- (4) 46" Poles – swaged on one end, hole in the other end
- (50) Carabiner clips
- (50) Rope hangers

Warning: This frame is not made to withstand severe weather or strong winds. Additional supports are available, such as ground sleeves and diagonal braces. Use your judgment as to whether or not your cage needs additional support. You may also use long stakes and cables and clamps to tie it down to the ground.

Step #1:

Lay out the following pattern on the ground where the vertical poles will be placed.

The frame is designed to be approximately 37' long by 16' wide, which is larger than the footprint of the net itself. This will allow the net to slow a ball more before it hits the frame, thus reducing the speed of ricochets.

Step #2: Installing the Ground Sleeves

Your kit includes (10) ground sleeves which create a very stable installation, and allows the system to be taken down in the off-season. Dig your holes in the locations as laid out in Step #1. Each hole should be approximately 24" in diameter and about 24" in depth. The greatest stability is attained when the holes are slightly wider at the bottom than at the top. Begin to pour concrete into the hole, position the ground sleeve, then fill the rest of hole. Be careful not to allow any concrete into the sleeve.

*This illustration shows the bolt hole exposed, however some customers elect to mount the sleeve flush with the ground to avoid hitting the sleeve with lawn maintenance equipment.**.

While the concrete is setting up, you can begin to assemble the framework for your batting cage. Please refer to the following diagrams to assist you in putting together the cross, vertical and longitudinal pole sections.

Step #3: Assembling the Frame

Important: Make sure to insert the ends of the poles completely into their respective 3 and 4-way fittings. DO NOT attempt to thread the supplied bolts through the holes in the ends of the poles – this will enlarge the frame unnecessarily and will make the frame weaker, and there's a good chance your net will not fit!

While the concrete is setting up, you can begin to assemble the framework for your batting cage. Please refer to the following diagrams to assist you in putting together the cross, vertical and longitudinal pole sections.

35' Pole Kit

35' (42mm) Pole Kit

A

Cross Pole Set (Total - 3 poles)

- 3 Pcs - 59" Straight (hole on **each** end)
- 3 Pcs - 17-1/2" Swaged one end (hole on other end)
- 6 Pcs - 59" Swaged one end (hole on other end)

B

Vertical Pole Set (Total - 6 poles)

- 6 Pcs - 59" Straight (hole on each end)
- 6 Pcs - 59" Swaged one end (hole on other end)
- 6 Pcs - 36-1/2" Swaged one end (hole on other end)

C

Length Pole Set (Total - 4 poles)

- 4 Pcs - 59" Straight (hole on **each** end)
- 8 Pcs - 59" Swaged one end (hole on other end)
- 4 Pcs - 46" Swaged one end (hole on other end)

Layout Diagram

Step #4: Setting Up the Frame

End Assemblies: With the poles still lying on the ground, connect pole sections to one cross pole section using the 3-way corner fitting. Thread the supplied 5/16" x 1/2" bolts into the fittings, and lock the fittings by tightening the bolts.

Middle Assemblies: With the poles still lying on the ground, connect two vertical pole sections to one cross pole section using the 4-way corner fittings. Thread the supplied 5/16" x 1/2" bolts into the fittings, and lock the poles into the fittings by tightening the bolts.

With 2 people, stand up each assembled section and place them in the sleeves. Install the longitudinal pole sections last, adjusting the fittings for any length variances. Each pole should go approximately half way into each fitting.

Thread the supplied 5/16" x 1/2" bolts into the remaining fittings, and lock the poles into the fittings by tightening the bolts.

****Make sure that the "through" part of the 4-Way fitting runs horizontally, as this allows for some adjustability ****

Add additional bracing (if necessary).

Step #5: Hanging Your Net

Using the supplied rope sections, make "hangers". Tie one long hanger about every 5-6' along the sides of the frame, and one short hanger off the center of each middle cross pole.

Stretch the net out on the ground and loosely tie off each corner to the vertical poles and raise the net up as high as you can. You will probably get it about 6' high.

Connect some of the hangers to the top of the net near the center of the frame.

Raise the corners up more, and keep adding hangers going toward the ends of the frame.

Once all of the hangers are in place, tie the corner ropes of the net firmly to the corner vertical poles at the desired height.
